Rails, Ruby, PostgreSQL, JavaScript, React.js, HTML, CSS, Git, Ableton Live, REAPER, Wwise, Unreal Engine

Technical Projects

Fantasy Sumo - [Github](#)

Technologies used: React.js, Ruby on Rails, PostgreSQL, external API, HTML, CSS
A website for a Fantasy Sumo game independently developed and played since 2019

- View info about wrestlers, learn terms, & build a team to compete with other users.
- Worked with my friend [John](#) to build an API of Ozumo data.
- Developed using Rails & React.js, deployed through Render.

Better Bathroom Bureau - [Github](#)

Technologies used: React.js, Rails, SQL, ActiveRecord, BCrypt, JavaScript, Google APIs
A catalog of bathrooms in Seattle, to increase access to relevant information

- Logged in users can add & review bathrooms and save locations to a collection.
- Front-end developed in React, using Google Maps APIs to display restroom locations.
- Back-end developed with Ruby on Rails, utilizing ActiveRecord to access data & BCrypt.

RESTly - [Github](#)

Technologies used: React.js, Ruby, SQL, ActiveRecord, JavaScript, Google APIs
A web app for finding and reviewing restaurants around San Diego

- Used Google Maps JavaScript & Geocoding APIs to display locations in Google Maps.
- Client-side developed in React using React Router 6 & custom CSS.
- Database and back-end developed in Ruby with ActiveRecord & SQL.
